Specifications

Size

Each individual roller shutter can be manufactured up to a width of 3.5m or a total of 9 square metres.

Curtain

The curtain is manufactured by interlocking 40mm flat, 42mm curved, 55mm curved roll formed, polyurethane foam filled slats or 40mm extruded aluminium slats to form a continuous hinge. Each joining slat is fitted with a moulded nylon end clip to prevent lateral movement and provide a smooth and quiet operation inside the side guides.

Bottom Rail

The bottom rail of the shutter is manufactured from an extruded aluminium section 65mm x 10mm which can encase a locking device. Weather seal is fitted as standard.

Locking

When the shutter is completely closed the design allows the shutter to lock automatically. For added security the bottom rail can house slide locks within the extrusion. This operates 2 x 10mm x 2mm aluminium flat bars which, when in the locked position, secure into the side guides on both sides of the opening. Key locks can also be fitted as an option.

Side Guides

The guides are manufactured from an extruded aluminium section 53mm deep x 22mm wide and 72mm deep x 25mm side for shutters over 3m. Weather seals fitted as standard.

Pelmet boxes

All Maverick roller shutters are enclosed in a various number of different size aluminium pelmet boxes ranging from 137mm to 230mm.

Axle

The axle can be manufactured from 50mm diameter aluminium round tube, 40mm or 60mm diameter galvanised hexagonal tube or 60mm diameter aluminium hexagonal tube depending on the application and shall be fitted with fully sealed steel ball bearings

Operation

Manual operation can be done with a simple hand operated winder or a hand feed strap system.

Doors and windows can be electrically motorised with various push button, remote control, key switch or battery back up operation.

Finish

Profile or slat comes in 12 standard colours.

Pelmet box and guides in 4 standard colours. Powder coating as an option in Dulux powder coated range.
